

100kw solar panel system price

100kw solar panel system price

Compare price and performance of the Top Brands to find the best 100 kW solar system. Buy the lowest cost 100 kW solar kit priced from \$0.95 to \$1.25 per watt with the latest, most powerful solar panels, module optimizers, or micro-inverters. For home or business, save 26% with a solar tax credit.

SunWatts has a big selection of affordable 100 kW PV systems for sale. These 100 kW size grid-connected solar kits include solar panels, DC-to-AC inverter, rack mounting system, hardware, cabling, permit plans and instructions. These are complete PV solar power systems that can work for a home or business, with just about everything you need to get the system up and running quickly. The kit prices shown include hardware components only; click on any kit to add your choice of full-service installation.

A 100kW Solar Kit requires up to 6,500 square feet of space. 100kW or 100 kilowatts is 100,000 watts of DC direct current power. This could produce an estimated 12,000 kilowatt hours (kWh) of alternating current (AC) power per month, assuming at least 5 sun hours per day with the solar array facing South. The highest output will be achieved with an unobstructed south-facing view of the sun for maximum solar power. The actual power generated will vary based on location, equipment and installation factors. Refer to your electric utility bill to find the actual kWh used per month and compare it to how much power these low cost 100kW PV systems can generate.

Installing a 100kW solar system can lead to significant cost savings over time. On average, a 100kW solar system can save up to \$31,025 per year. Over the 25-year lifetime of the solar panels, this equates to a total savings of \$775,625.

The cost of electricity has seen a staggering increase of 270% over the past 40 years. This rise in electricity costs is depicted in the chart below:

Source: U.S. Bureau of Labor Statistics

The continuous upward trend in electricity costs makes investing in solar energy an attractive option for homeowners and businesses alike.

One of the key benefits of a solar system is the ability to generate your own electricity. The more self-generated energy you use, the less you rely on purchasing electricity from utility companies. This leads to

100kw solar panel system price

significant savings on your utility bills over time.

Not only can you save money on your energy bills, but you can also generate additional income through the excess energy generated by your solar system. Any surplus electricity that you don't use can be sold back to the grid. Based on current electricity costs, you can expect a 20% return on investment per year on your solar panels.

The typical cost for a 100kW solar system is approximately \$200,000. However, it's important to note that prices for solar systems have come down substantially over the past 10 years.
