Explore the world of grid-tie (utility tie) PV systems with NAZ Solar Electric. Our selection features solar panels and specialized grid-tie inverters, designed to operate without batteries. These innovative systems take DC voltage from solar panels, utilizing a special inverter to convert it directly into AC power, seamlessly matching the grid's requirements. As a result, any electricity generated by your solar panels directly offsets your consumption from the power company, potentially allowing for surplus power to be fed back into the grid.

This section showcases all solar inverters for grid-tie systems, including top brands we normally stock such as Fronius, Sunny Boy, and Enphase microinverters. Additionally, we offer Xantrex, PV Powered, and other major brands, ensuring a comprehensive selection for every need. The Enphase micro-inverters, known for their "plug and play" single panel solution, can be installed individually or as part of large arrays. Please note, battery-based "grid interactive" inverters manufactured by Outback Power are not included in this section but can be found in the battery-based inverter category.

Embark on your solar journey with confidence through The NAZ Approach, our comprehensive process that guides you from initial consideration to installation and beyond. We stand by you at every step ensuring personalized solutions and technical support throughout the lifespan of your solar system.

Questions about our grid-tie inverters? Our solar application engineers are ready to help you. Contact us for customized solutions tailored to your needs.

Grid tie inverters with limiters are crucial components in modern renewable energy systems. They play a pivotal role in optimizing power generation and ensuring efficient utilization of solar energy. In this article, we'll see how a grid tie inverter with a limiter works. We will also list some of the best grid tie inverter with limiter available in the market.

A grid-tie inverter with a limiter is a device used in solar power systems to efficiently manage energy production, consumption, and grid interaction. Here's how a grid tie inverter with a limiter works:

1. Solar Power Generation: Solar panels produce direct current (DC) electricity from sunlight.
2. Grid-Tie Inverter (GTI): The working principle of this device states that it converts the DC electricity generated by the solar panels into alternating current (AC), which is used in homes and the grid.

3. Power Limiter: The limiter, also known as a current transformer, monitors the power consumption of your home or facility.
4. Monitoring Power Consumption: Continuously measuring your electricity usage, the limiter sets a limit on exported power.
5. Prioritizing Local Consumption: Solar power is prioritized for local use. Excess electricity not consumed is considered for export to the grid.
