

400 watt vertical wind turbine

400 watt vertical wind turbine

The CXF–400 is a hybrid vertical axis wind turbine (VAWT) system which combines drag and lift-based design together. It incorporates an S-type Savonius rotor and three airfoil blades of egg type Darrieus rotor to maximize the output performance. The entire structure floats on a magnetic field minimizing drag resistance while increased performance plus isolating mechanical rotation vibration into the boat hull. This unique aesthetically pleasing wind generator provides excellent performance on a boat because of its ability to operate on winds coming in any direction. Its low rpm makes it very quiet.

This item has been tested to certify it can ship safely in its original box or bag to avoid unnecessary packaging. Since 2015, we have reduced the weight of outbound packaging per shipment by 41% on average, that's over 2 million tons of packaging material.

To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzed reviews to verify trustworthiness.

"...Rigid molded Styrofoam. Assembly tools included. Directions in chinglish of course but easy to follow none the less. Quality materials...." Read more

"...The manufacturer make a solid effort to negate this and includes fairly thorough instructions which I never read until I screw up or get stuck...." Read more

"...Assembly directions were clear and easy to follow and the turbine appears to be well made - and

400 watt vertical wind turbine

robust...." Read more
