On Tuesday, February 1, 2022, an increase in the cost of electricity for residential consumers in Armenia came into effect. The rates had been set by a decision of the Public Services Regulatory Commission (PSRC) on December 29, 2021. These decisions used to be made in the summer but, since 2016, have been taken just prior to New Year and Christmas festivities, in the middle of winter, when cold weather and social obligations keep the public's attention elsewhere.

Back in June 2015, a 16.6% price hike sparked the Electric Yerevan protests that blocked traffic on Baghramyan Avenue, where the National Assembly and Presidential Palace are located; it is a key artery

leading to Downtown Yerevan from its northern suburbs. That movement attracted international attention after the government used water cannons to disperse the protesters. As a result of the protests, the privatized electricity distribution company Electric Networks of Armenia (ENA) was sold by Inter RAO (a company partially owned by the Russian state) to Tashir Group (controlled by Russian-Armenian businessman Samvel Karapetyan). The price hike was subsidized before ultimately being scaled back.
