The term "Aussie Batteries & Solar" or "us" or "we" refers to the owner of the website whose registered office is . Our ABN is 51 640 926 718. The term "you" refers to the user or viewer of our website.

Shop Quality Lithium Batteries - Introducing our state-of-the-art range of Australian Made Lithium Batteries, the best in Aussie Made 12V lithium battery storage. SHOP ONLINE >>>

Lithium Batteries are often considered superior to traditional lead-acid batteries for several reasons:

Weight and Size: Lithium batteries are significantly lighter and more compact than lead-acid batteries with similar power capacity. This makes them ideal for applications where weight and space are critical factors, such as in recreational vehicles (RVs), boats, and solar power systems.

High Energy Density: Lithium batteries have a higher energy density, which means they can store more energy in a smaller and lighter package. This results in a longer-lasting power source and more efficient use of space.

Longer Cycle Life: Lithium batteries typically have a longer cycle life compared to lead-acid batteries. They can withstand a higher number of charge and discharge cycles, making them more durable and cost-effective over the long term.

Faster Charging: Lithium batteries have a higher charge acceptance rate, allowing them to be charged more quickly than lead-acid batteries. This can be advantageous in situations where a rapid recharge is necessary, such as in electric vehicles or solar power systems with intermittent sunlight.

High Discharge Efficiency: Lithium batteries maintain a more consistent level of power output throughout the discharge cycle. In contrast, lead-acid batteries may experience a voltage drop as they discharge, affecting the efficiency of the system.

Aussie battery and solar

Maintenance-Free: Lithium batteries are generally maintenance-free, while lead-acid batteries may require periodic checks for water levels and other maintenance tasks. This makes lithium batteries more user-friendly and convenient.
