Referrals increase your chances of interviewing at Solar Turbines by 2x

Get notified about new Power Generation Technician jobs in Bandar Seri Begawan, Brunei-Muara District, Brunei.

We've placed staff onto Brunei's largest energy projects and chemical processing facilities.

NES Fircroft opened its office in Brunei in 2013, to further complement our already broad Asia office network. Based in the country's capital, Bandar Seri Begawan, we provide contract staffing and permanent hire services and have placed both expatriates and locals onto large scale Oil & Gas, Power, and construction & Infrastructure projects.

Our Brunei team currently manages 150+ contractors. We're committed to supporting the local business development directive which means hiring local personnel on the projects we staff. Our local placement experience includes recruiting large teams of technical personnel onto multiple energy projects.

We're not a typical recruitment agency; we provide a premium, reliable service and our reputation in the local tight-knit Brunei market precedes us. The businesses that we support benefit from our on-the-ground service and the face-to-face interaction we bring to their contract workforce.

Whilst drilling expertise is a specialism for our operation, we place staff across the entire Brunei energy spectrum. Solar is the biggest renewable energy venture making waves in diversifying the local energy market, being pushed by regulatory bodies and operators alike. There are also many new exploration oil wells due to start operation next year - our developed candidate networks are equipped to staff both ventures.

Our regional assignment support teams are on-hand to take care of all contractor logistics.

Whilst we have a wealth of experience in hiring nationals from Brunei, we can leverage our wider South East Asian and global office network to source talent from overseas when required, sponsoring workers' visas and work permits on a short term (SAWP) or long term (LPA) basis. We've engaged local personnel specifically to shadow expatriates on energy projects so that they benefit from hands-on training and can upskill their ability. For compliance purposes, we also coordinate local business reporting and submit reports to the Labour department and Department of Energy.

Our set-up enables us to payroll contractors in-country, and we've helped many businesses to consolidate their payroll by using our service. When enlisting the support of NES Fircroft, businesses can rest assured that they're accessing recruitment expertise from a truly global company with the expertise and experience
