

Battery storage guinea

The gold standard of business intelligence.

CWE and Guinean Government will develop the project under public-private partnership (PPP).

Your download email will arrive shortly

According to CWE, the firm's second mega hydropower project in the country is deemed as the three gorges project.

Souapiti is the second hydropower project on the Konkoure river, situated 135km from Guinea capital city Conakry and 6km upstream of the completed Kaleta hydroelectric project.

Once operational, the project will meet power demands in Guinea, as well as supply additional power to neighbouring countries such as Gambia, Senegal, Guinea Bissau, Sierra Leone, Liberia and Mali.

Last October, CWE and the Guinean Government signed a framework agreement on the development of Souapiti hydropower project.

In December, the government held a ground breaking ceremony for the project.

Sinohydro is diversifying into Africa. Very active in the hydraulic sector, the Chinese state-owned company won the tender for the construction of the Gardete solar power plant. The call for expressions of interest came in March 2019 from the African Biofuel and Renewable Energy Co. (Abrec), an organisation, supported by several African states, that promotes renewable energy and energy efficiency in Africa.

The solar project for which Sinohydro signed the engineering, procurement and construction (EPC) contract involves three facilities. The first is a photovoltaic solar power plant to be built in Gardete, a town located 8 kilometres from the capital Bissau. The facility will have a capacity of 20 MWp. It will have a battery storage system to provide electricity to the inhabitants of Bissau and surrounding areas after sunset. Sinohydro will also provide a 30 kV line to transport the electricity to B'r where it will be fed into the national grid via a substation.
