The proposed scope for 880KW/3520kWh TESLA Battery Energy Storage System was a fast-paced project that consisted of installing multiple TESLA battery storage systems within the Huntington Library Botanical Gardens, located in San Marino, CA. Due to the project's fast-tracked schedule, we began design in April of 2019, started construction in November and was completed with project close-out in December of that same year, completing the construction in just 2 short months.

Much of the Botanical Gardens are covered with lavish greens, large trees and exotic plants and flowers. Because of the nature of the gardens, the battery system needed to be placed on skids in order to maintain the integrity of the root system of the large oak trees that the battery system was being installed nearby. Stronghold worked alongside the Gardens staff and after surveying the grounds, we were able to establish a root map of the Oak Tree. Through the surveying efforts by our staff, we were able to determine that the use of a concrete pad would prove to be more beneficial than the skids that were previously scoped for the project. Through this important change, it saved the client a considerable amount of cost savings as well as installation and start-up time.

Read more about this project on Stronghold's blog.

Solar Market Outlook in San Marino San Marino is a small country and is known as one of the world's oldest republics. Despite being small, it has joined in what is known as the solar revolution that is taking over the global energy sector.

There are solar developers of all sizes in San Marino, which makes it possible to generate a good amount of solar power as part of the republic's energy mix. This coincides with the growth of the solar market in Italy; experts also believe that there will be more growth in the region in the years to come.

San Marino has also launched new tenders for auctions of solar projects. This is just one step taken towards boosting the number of solar projects in the country and to speed up the solar deployment. The long-term goal for this is to not only boost the country's solar energy generation capacity; the government is also hoping to reduce its carbon emissions and take a step towards environmental protection.

In San Marino, most of the solar power equipment for solar installations is from global or online suppliers and

Battery storage san marino

distributors. There is still a lack of local manufacturers and companies making solar equipment.

Wholesale Solar Battery for sale! A solar battery is a device that is charged by a connected solar system and stores energy as a backup for consuming later. Users can consume the stored electricity after sundown, during peak energy demands, or during a power outage.

Using a solar battery can help users to reduce the amount of electricity they would normally buy during peak hours. The battery can store the extra energy produced from solar panels during the day to avoid using electricity at a more expensive rate.
