Best home electric car charger

After 28 hours of research and 85 hours of testing, we found the United Chargers Grizzl-E to be the best at-home charger for EVs with a J1772 port, whereas the Tesla Wall Connector is best for EVs with a J3400...

Best home electric-car chargers as voted by EV drivers

If you have an electric vehicle (EV) or plug-in hybrid car, or you're thinking of making the switch, it pays to buy your own home EV charger.

Charging your EV from home makes life easier and could save you a huge amount of money. You'll save hundreds of pounds a year on public charging fees, especially if you set your charger to operate during your energy tariff's off-peak hours. You could even cut your energy bill and carbon footprint to zero by linking your charger to your solar panels.

However, a home EV charger is a sizeable upfront investment. The average charger costs between £800 and £1,200 to buy and install. Even the cheapest home EV chargers we looked at for this article don't leave much change from £600, and installation adds around £200 to the bill.

We're here to help you find the best home EV charger for your budget and your needs. Our team of researchers analysed the UK home charging market and whittled the field down to the best.

When choosing our top 11, we focused on criteria including affordability, appearance and ease of use, but we also prioritised chargers with excellent warranties, companion apps and verified customer reviews. See our methodology below for more information on how we selected the best chargers.

The VCHRGD Seven may not have the catchiest name, but this new charger rose to the top of our list thanks to its versatility, ease of use, smart functions and value for money.

The unit measures 34cm at its longest, and looks neat and modern with its matt black cover and LED status light. Despite its swish appearance, this is one of the cheapest home EV chargers you can buy, with both the tethered and untethered models to be found for under £500. Make sure you budget at least £200 for installation.

We recommend going for the tethered version if you're a home charging beginner, because its

Best home electric car charger

permanently-attached cable is easier and more convenient to use. On the other hand, the untethered version supports more connection types and is more tidy, because you can remove the cable and stash it in your garage or boot.

Whether you opt for tethered or untethered, this charger's smart functions help you get your money's worth by integrating with your solar panels and automatically balancing power sources. Wi-Fi and Bluetooth are supported, and the companion app connects to the VCHRGD Cloud to let you control your charging, track your history and utilise smart tariffs.
