

Canberra electricity policy

Make Your Next Choice Electric. Get ready for ACT's all-electric future and create ...

Permanent abolishment. Abolishment (also referred to as decommissioning) involves ...

The ACT Government has partnered with Australia's leading consumer advocacy group, CHOICE, to create an online experience - Make Your Next Choice Electric. The tool helps Canberra households to create their own energy transition plan and switch off gas.

You can also access information through the Your Energy Journey tool on how to take action and transition to an all-electric home or business.

To help the ACT prepare for an electric future, we're developing the Integrated Energy Plan which will step out the pathway to transform the Territory's energy systems into the future and ensure a fair and equitable energy transition for all Canberrans.

We're doing this because an electric Canberra will allow us to power our city, homes, businesses, and transport in a cleaner and cheaper way.

Fossil fuel gas accounts for more than 20% of our emissions here in the ACT and transport accounts for more than 60%. Our plan to transition is to electrify our city where possible and explore the potential for a renewable gas market where electrification is not a feasible option.

We recognise that fossil fuels will remain an important source of energy over the next 10 years. That is why we are approaching this transition responsibly and sustainably over the next 20 years. We want to enable ACT homes and businesses to save money by taking small steps and making smart climate choices when transitioning appliances and vehicles to electric at a time that is right for them.

This pathway gives you a way to help you start planning for the transition and commencing the switch. We are asking you to consider making your next choice electric.

Learn more about how the ACT Government made the decision.

We're also inviting community feedback on a plan to transform our energy systems into the future and ensure a fair and equitable transition.

In 2020, we secured a nation-leading 100% renewable electricity supply for the ACT. This was a huge achievement for the ACT and a significant step toward our net zero emissions target. Over the next 20 years,

Canberra electricity policy

Canberrans will gradually transition their homes and businesses off fossil fuel gas to avoid higher bills and make more savings. The timeline below outlines what you can expect and our plan to help the ACT reach net zero by 2045.
