A home solar system is a great long-term investment but its upfront cost can be high. Still, enough brands on the market offer budget-friendly solar panels. In this article, we'll talk about how to pick the right brand and type of panels to enjoy cheap solar energy at home.

There are three prominent types of solar panels: monocrystalline, polycrystalline and thin-film panels. Monocrystalline panels are the most popular -- you may recognize them by the black color of their cells. Polycrystalline panels whose cells have a bluish hue are cheaper but they are less efficient and a powerful system out of polypanels is going to take more space. Thin-film panels have small power output and therefore are cheaper but their cost per watt is similar to monopanels or higher.

Among monocrystalline panels, the cheapest solar panels come from China. American-made PV modules are slightly more expensive. The most expensive panels come from big-name brands like Panasonic, LG and Sunpower.

Of course, there are differences between a low cost solar panel and an expensive one. Here are the things that you should look out for.

As with most things, you risk overpaying just for a brand name. While LG or Panasonic panels are amazing, they probably wouldn't be so expensive if not for the corporations standing behind them. There are enough manufacturers that make affordable solar panels but whose names you've probably never heard before unless
