Changes in both the climate system and socioeconomic processes -including ...

This page presents South Sudan's projected climate. The Mean Projections ...

High-level Summary: Compound Heat Risk. This section presents the compounded ...

Climate-change driven floods are now impacting about one million people in South Sudan every year, aggravating an already precarious situation for one of Africa's most fragile and conflict-affected countries.

In other parts of the country, many more people have been tipped into food insecurity as droughts have killed livestock and disrupted crop cycles. To escape both flooding and drought, pastoralists have moved their animals far beyond the traditional transhumance routes, bringing them into fierce conflict with sedentary communities, including South Sudanese who have recently returned home from exile.

"We see how some of the most vulnerable people are impacted by this global problem, yet their contribution to the causes of climate changes is minimal," says Arafat Jamal, UNHCR's Representative to South Sudan, "We cannot wait for a dire situation to get worse. We had to take action."

Furthermore, as part of a strategy to boost access to clean energy and cut greenhouse gases emissions, UNHCR has:

As the world marks this year's World Environment Day with the theme of "Only One Earth, Time is Running Out", South Sudan must not be forgotten as it is where for many people, time has already run out as the places they have called home become uninhabitable due to climate change.
