

Commercial microgrids haiti

Commercial microgrids haiti

The Sigora platform was conceived, developed, and fine-tuned in the remote North West of Haiti, where Sigora Haiti - a wholly-owned subsidiary of Sigora International - launched the country's first private utility.

With over 4,000 units deployed across three of its own micro-grids, Sigora benefits from constant feedback, enabling us to create a product optimally suited to frontier market conditions.

Sigora grids have been able to prove economic sustainability and commercial viability, leading to significant commercial investment to scale operations and expand the grid to service even more users.

Learn more about Sigora's proprietary smart meter and grid management technology.

Sigora Haiti stands to tip the balance in expanding energy access by making micro-grids an investable proposition.

The Sigora green micrutility is a unique approach for the environmentally and financially sustainable electrification of underserved communities.

We leverage our unique platform and broad experience in execution to rapidly install and scale interconnected clean energy microgrids - the micrutility - in frontier markets.
