Participants in the Community Microgrid Assistance Partnership (C-MAP) will receive technical support and/or funding from the U.S. Department of Energy (DOE) Office of Electricity (OE) to design or deploy a microgrid that aligns with community-defined priorities or to improve performance of an existing microgrid technology.

Microgrids that generate power from renewable energy reduce the dependency on imported fuels, contributing to community self-sufficiency and resilience.

Applications are now open. View program details below and apply on [sam.gov](https://sam.gov) by Dec. 20, 2024.

C-MAP recognizes that each community has different needs and is in its own stage of adopting microgrid technology. OE is offering various opportunities to meet proponents where they are, from supporting early-stage development planning to helping communities improve or repair existing microgrids.

Outcomes of participating in C-MAP may include:

The pilot program will focus on communities in Alaska and Hawaii, and Indigenous Tribes, primarily in the Great Plains and Southwest.

Every community has unique interests and is in its own stage of microgrid development. C-MAP offers four different topic areas that provide funding and other resources to meet key stages of development. Proposals will be evaluated based on the published criteria, but here are example projects that illustrate each topic:

OE is now accepting competitive proposals from state or local government, Tribal organizations, and non-profits. Find the instructions on the [sam.gov](https://sam.gov) opportunity page.

If you are interested in multiple tracks, you may submit multiple proposals, but do not combine topics into one proposal.

There are several one-time actions that must be completed before submitting an application to this funding opportunity. It is vital that applicants address these items as soon as possible, as some may take several weeks.
