

Cost to install wind generator

Cost to install wind generator

If you're wondering how much it costs to install a wind turbine then in this article I'll break it down for you. However, you may need to be a bit more specific with your question, because the cost varies wildly, depending on a number of factors.

Before I start explaining what the costs are, and why they differ so much, here's a handy chart to show you at a glance how much each different type of turbine costs to install, depending on where you're installing it.

Note: These include the cost of the wind turbine itself & see further down this page for a full breakdown of costs.

So, to help you get the information you're looking for, let's first clarify what type of wind turbine you're talking about, and also where it's going to be installed.

One factor--more than any other--determines the cost of installing a wind turbine; and that is whether it's being installed on dry land (i.e. onshore), or if it's being installed out in the ocean--as part of an array of wind turbines (i.e. an offshore wind farm.)

However, you're probably wondering how much it costs to install a wind turbine to reduce your home electricity costs? Or maybe to generate extra revenue for your farm. (And, in both cases, to help the environment too!)

As you can see from the chart above, installing a wind turbine onshore, on dry land--like adding one to your home or residential property or farm--will cost far less than an offshore wind turbine costs to install out at sea.

It costs millions of dollars to install offshore wind turbines out at sea. Due to the extreme costs involved, offshore wind farms are only feasible for large corporations with very deep pockets.

So, for the rest of this article I'll assume you're wanting to know more about how much it costs to install windmills onshore.

There are quite a few other factors which significantly affect the cost of installing a wind turbine on dry land.

1. Size of Wind Turbine(s)

A large wind turbine will need a concrete foundation digging, and all the associated civil engineering costs for plant hire, labour, aggregates, steel and so on.
