Trends in the market: In Turkmenistan, the Storage Market within the Data Center ...

Statista R identifies and awards industry leaders, top providers, and exceptional brands through exclusive rankings and top lists in collaboration with renowned media brands worldwide. For more details, visit our website.

The Data Center market is a critical segment of the technology industry focusing on supplying and managing physical infrastructure necessary for hosting and operating IT systems, primarily servers, storage, and network equipment. This market spans from traditional in-house data centers to sophisticated facilities offered by specialized providers, covering services like hosting, shared data center facilities, and managed data center solutions. It targets a diverse client base, ranging from small businesses to large enterprises, offering flexible, scalable solutions for their IT infrastructure needs. This sector is integral to the efficient functioning and security of IT operations in various organizations.

The Data Center market is structured in three markets based on the services model provided by the companies.

The Data Center market includes revenue, revenue change, average spend per employee, and key player market shares as key performance indicators. Market values represent revenues paid to primary vendors at the manufacturer price level either directly or through distribution channels (excluding VAT). Revenues are generated through both online and offline sales channels and include spending by consumers (B2C), enterprises (B2B) as well as governments (B2G). Detailed definitions of each market can be found on the respective page where the market data is displayed.

Key players in the Data Center market include companies such as Dell, HPE, Huawei, and Ericsson.

Key regions: United Kingdom, Brazil, India, China, Indonesia

The Storage market focuses on computing equipment specifically designed for information storage, including storage-intensive servers, external storage systems, and storage expansion systems. This market specifically focuses on solutions that target the high-capacity storage requirements of businesses and organizations, setting aside options like consumer-grade storage products such as portable storage devices and Network Attached Storage (NAS). These storage systems are vital for organizations that require dependable archiving, data backup, and recovery capabilities, serving as an indispensable component in advancing the digital capabilities of industries worldwide.

The Storage market includes revenue, revenue change, average spend per employee, and key player market shares as key performance indicators. Only revenues that are generated by primary vendors at the manufacturer price level either directly or through distribution channels (excluding value-added tax) are included, and revenues generated by resellers are excluded. Revenues are generated through both online and offline sales channels and include spending by consumers (B2C), enterprises (B2B) as well as governments (B2G). Detailed definitions of each market can be found on the respective page where the market data is displayed.

Huawei, the world's leading supplier of smart devices and infrastructure solutions in the field of ICT, plans to build a large data processing center in Turkmenistan. This was stated by Ma Xiaole, Huawei's Deputy General Director in Turkmenistan, in an interview with ORIENT.

At the international exhibition "Turkmentel-2022", held in Ashgabat, Huawei had one of the most visited stands. And this is not surprising, because the Chinese company is a global leader in the development of information and communication technologies and intelligent consumer devices. Three years ago, the company opened a new era in ICT - 5G by introducing a new series of flagship smartphones of the Mate line and a mobile processor Kirin 990.
