

Dps energy and heating

Dps energy and heating

We're experts in the field and have been identifying and delivering energy reduction measures for homes around the UK since 2010. You could say we're on a mission, not just to make the country's homes warmer, but, also cheaper to heat which is good news all round.

Our friendly, approachable team know pretty much all there is to know about energy efficiency and they're just a call away. You can join the millions of happy, warmer DPS Energy customers today. Whether you are eligible for fully funded help or are funding the improvements from your own pocket, you can have the work done, safe in the knowledge that you are in experienced hands with the DPS Energy team.

“Will be telling all my friends about DPS Energy, a free boiler including fitting with good service from Paul and Matty. Thanks again.”

“Great service and quick turnaround. Highly recommended.”

“Fantastic company. great, helpful and very professional.”

“Excellent service from start to finish the assessment ran very smoothly and install date was very quick. Post install my boiler is working immaculately so thank you very much.”

“Fantastic company, very easy to deal with, very professional and answered all my questions. Highly recommend. Thank you for everything you've done for my property. Very happy!”

The boiler fires up by igniting its fuel, usually gas or oil. The heat exchanger warms up the water. A pump transports the water to the hot water storage tank for use throughout the day. When you set your thermostat, the hot water moves to through your radiators, emitting its heat energy to warm up the room. The hot water is also directed to water outlets in your bathroom and kitchen when you turn on a tap.

WHAT IS THE ENERGY COMPANY OBLIGATION (ECO)?

The energy companies obligation was originally introduced in 2013, and replaced two previous schemes: the carbon emissions reduction target, or CERT; and the community energy savings program, or CESP.

Like CERT and CESP before it, the energy company obligation legally requires the energy companies to help

Dps energy and heating

improve the energy efficiency of some of their customers" homes across the UK, thereby reducing carbon emissions and cutting energy bills. A win-win situation.
