

Electric grid south ossetia

In South Ossetia on Friday, a backup power line was launched in a solemn ceremony.

President Anatoly Bibilov, Deputy Secretary of the Security Council of Russia Rashid Nurgaliev and the Head of the Presidential Directorate for Interregional and Cultural Relations with Foreign Countries Igor Maslov, members of the Russian delegation and the power engineers themselves pressed the main button for starting the power line.

"A complex work was carried out, specialists made complex technical solutions to put the power transmission line into operation. This is a truly significant event for South Ossetia. One cannot imagine how important this is for every resident of South Ossetia, because a power outage even for two or three hours in any republic becomes a state of emergency. And when it comes to days, weeks, we understand the state of the republic all these years," the President said.

Bibilov expressed his gratitude to everyone involved in the construction work of the backup power line, once again noting its strategic importance for the Republic.

The construction of an additional power line to South Ossetia was carried out by the Federal Grid Company of the Russian Federation within the framework of the Investment Program for the Promotion of Social and Economic Development. The investment in the project amounted to 1.7 billion roubles

Deputy Prime Minister Alexander Novak co-chaired the 21st meeting of the Intergovernmental Commission on Socio-Economic Cooperation between Russia and the Republic of South Ossetia.

President of South Ossetia Alan Gagloyev led the South Ossetian delegation. The meeting was also attended by Prime Minister of South Ossetia Konstantin Dzhussoyev and government body representatives from both Russia and South Ossetia, including the Russian Ministry of Economic Development, the Finance Ministry, the Energy Ministry and the Federal Customs Service.

The discussion included energy issues, the funding of pensions for Russian citizens living in South Ossetia, debt restructuring and improving payment discipline on energy supplies from Russia, and the parameters and terms for implementing the state programme on the Socio-Economic Development of the Republic of South Ossetia in 2022-2025. The talks were also focused on the integration process in customs and taxes.

"South Ossetia is our strategic ally. Russia has long-term interests in ensuring its security and socio-economic stability, in part, in the context of the new geopolitical realities. Russia-South Ossetia bilateral relations have stood the test of the time and are built on allied ties and integration. We continue to develop the political dialogue on executive and legislative power, foreign policy and defence interaction, trade, economic and

interregional ties as well as cultural and humanitarian exchanges," noted Deputy Prime Minister Alexander Novak.

"Nobody has eliminated the goal of switching from recovery to economic development; we need to ensure this under any circumstances. There is no reason to say that the republic will achieve its goals without Russia's support. We rely on assistance from our Russian friends. For our part, we continue changing ineffective approaches to socio-economic problems. I think, given close cooperation and understanding, we will be able to achieve results not only in our republic but also in all of the Caucasus," emphasised President of South Ossetia Alan Gagloyev at the meeting.

In 2022, Russia's trade with South Ossetia totaled 9.7 billion roubles, which is a 4.2 percent increase over 2021. Work is underway to enhance South Ossetia's investment appeal. Experts are discussing 13 investment projects in agriculture, the investment industry, logistics and tourism with a total value of over 4.5 billion roubles. Their implementation will create over 760 jobs and the republic's budget will increase by over 600 million roubles. Alexander Novak urged his colleagues to increase the investment appeal of South Ossetia through smooth cooperation on joint projects that allow the republic to develop its industrial and agricultural sectors and services.

Mr Novak instructed the Energy Ministry and his colleagues from South Ossetia to study the programme for improving the discipline of payment for energy imports from Russia, including providing the state with metering devices, identification and elimination of the causes of losses in the power grid, restructuring of the debt, upgrading of the networks, and improvement of tariff policy.
