

Electricity consumption baku

Because of its considerable hydrocarbon production, Azerbaijan has one of the world's highest energy self-sufficiency ratios, with production exceeding demand almost four times. Electricity generation in Azerbaijan has increased by more than 50% since 2010, amounting to 29.0 TWh in 2022.

Statistical collection "Energy of Azerbaijan" " contains national energy balance, commodity balance of energy products and other necessary information on energy statistics for 2019-2023 years.

Azerbaijan Electricity Consumption data is updated yearly, averaging 18,955.000 kWh mn (Median) from Dec 1995 to 2023, with 29 observations. The data reached an all-time high of 24,194.000 kWh mn in 2021 and a record low of 14,216.000 kWh mn in 1997.

Electricity generation in Azerbaijan has increased by more than 50% since 2010, amounting to 29.0 TWh in 2022. It is mostly generated by natural gas (more than

Azerbaijan: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

In the selection box above you can also add or remove additional countries and they will appear on all of the charts on this page. This allows you to compare specific countries you might be interested in, and measure progress against others.

In the energy domain, there are many different units thrown around - joules, exajoules, million tonnes of oil equivalents, barrel equivalents, British thermal units, terawatt-hours, to name a few. This can be confusing, and make comparisons difficult. So at Our World in Data we try to maintain consistency by converting all energy data to watt-hours. We do this to compare energy data across different metrics and sources.

How many people do not have access to electricity?

Electricity is a good that adds massive value to modern life: from having light at night; to washing clothes; cooking meals; running machinery; or connecting with people across the world. Many would argue that it is a crucial for poverty alleviation, economic growth and improved living standards.¹

Electricity consumption baku

This interactive chart shows the percentage of people that have access to electricity.

How many people do not have access to clean fuels for cooking?
