

## Energizer e241s

Energizer Energy E241s alternatives, related devices. Released 2019, ...

Energizer has launched the Energy E241s, a new feature phone that combines the long battery life and simplicity of a feature phone with abilities that qualify for a modern smartphone. It was released just a few months ago &#8211; back in September &#8211; and it quickly made a name in the market for its stunning abilities: great battery life, decent VFM and the notorious usability that only a feature phone can deliver nowadays.

Energizer was kind enough to send one Energy E241s to our HQ and I didn&#8217;t miss the chance to spend some days with it as my second phone &#8211; nope, I wasn&#8217;t ready to let my Android smartphone rest. I admit it. In any case, the E241s made my day with its impeccable battery life that can reach up to 6 days of stand by time and possibly a little over 25 hours of non-stop talk time!

Don&#8217;t expect too much from it, I have to warn you. It&#8217;s not for those heavy duty users out there, nor for those who like the merits of a fully fledged smartphone, no. It&#8217;s destined to become your No.1&#8230; second phone, a good alternative if you want to be connected but&#8230; not TOO much connected.

The Energizer Energy E241s is available from the official website of the company at a price that&#8217;s currently at 46EUR. See? That&#8217;s a good VFM, isn&#8217;t it?

The retail box includes the phone, headsets, a battery, a data cable, a charger and a guide book in multiple languages.

The rest of the body is plastic too, but is designed to look like carbon fibre. If you have a look at the back side of the device, you will find the VGA camera module in the top left with the LED flash and the speaker in the right side of it. Obviously, there is a microphone placed at the top of the device and a second one at the bottom for decent phone quality. There&#8217;s also a 3,5 mm port for a headphone jack and a microUSB port so you can connect it to the PC and your favorite headphones.

Energizer has placed a notch at the back panel that can be used to open the phone and see th removable battery, along with 3 slots. Two slots for dual SIM cards and one more for a microSD card up to 128GB &#8211; that&#8217;s a lot of room for high quality MP3 songs.

As you can imaging, a phone with such a small display, is also very light &#8211; weighing a mere 96 grams. It&#8217;s size is&#8230; 1/3 of an average smartphone today with dimensions 125.3 x 54 x 14.5 mm so you can be certain that it will follow you wherever you may go, with no issues.

## Energizer e241s

The Energy E241s packs a 2.4 inch TFT display with QVGA resolution ( 240 x 320 pixels), 4:3 ratio, 170 ppi kai 27% screen-to-body ratio. No, the display is not black and white, as it can deliver more or less&#8230; 256K colors. It also packs a Spreadtrum SC9820E SoC, which comes with a low voltage, long endurance Dual-core (2&#215;1.3 GHz Cortex-A7) CPU. The CPU is assisted with 512MB RAM and an equal amount of ROM. There is also a Mali T-820 GPU but I am sure you will not be needing it for high end mobile gaming battles ?

At the back we can find a basic VGA camera (0.3 MP) along with a LED flash. The camera is able to record video at the same resolution. For those of you asking, yes, there is also a second similar camera in the front for selfies &#8211; with the same very poor resolution (VGA).

Energizer has to be one of those companies who still prefer the a 3.5mm port for a headphones, as they have placed one in the device, along with native FM radio support. The E241s has also WLAN support (Wi-Fi 802.11 b/g/n) and can be used as a hotspot! There is Bluetooth 2.1 compatibility as well for your true wireless earphones in case you don't like wired ones, along with GPS support too! Last but not least, the handset packs a microUSB port for charging and data transfer &#8211; although I wish it had USB Type-C compatibility.
