Our support available to help you 24 hours a day, seven days a week.(630) 551-6358

Energy Solutions Heating & Cooling is a family-owned and operated business. We only recommend Trane products when it comes to new heating and air conditioning installation. Whether your office or home needs a new HVAC system, we can handle the job.

Our knowledgeable staff is available around the clock. We won't charge extra for emergency appointments outside of regular business hours.

Trust our HVAC professionals with your heating and cooling repair, install, or maintenance.

A/C Tune-up and Safety Inspection

A New Full System High Efficiency Air Conditioner and Furnace Installed

Sam founded Energy Solutions in 1995 to provide utilities, governments and businesses with Demand Side Management (DSM) program design, marketing and implementation assistance. His vision for the company was - and still is - to create large-scale environmental benefits by creating market-driven solutions that make adopting environmentally friendly practices good for business. Since then, Sam has grown Energy Solutions from a one-person company operating out of his home to a nationwide company with expanded solutions that deliver best-in-class upstream programs, energy-efficiency codes and standards expertise, and demand response solutions to support renewables in the power grid.

As Energy Solutions has scaled, the company's mission and culture have not changed. In 2013 Sam created an Employee Stock Ownership Plan (ESOP) that made Energy Solutions' employees owners in the business and, literally, invested in its success.

Sam received a bachelor's degree in Mechanical Engineering from UC Berkeley and worked at Lawrence Berkeley National Laboratory while earning a master's from the Energy and Resources Department at UC Berkeley. After completing his degrees, he went to work at a large consulting firm for three years before leaving to pursue his vision of creating a mission-focused company dedicated to addressing climate change.

Chris leads the overall strategic direction for Energy Solutions and provides the vision for the company's development of new initiatives. He is the executive manager for integrated demand side management programs and oversees clean transportation, renewables, information systems, and intelligent grid services.

Before joining Energy Solutions, Chris was the CTO of Confoti, Inc., a consumer digital technology services

Energy solutions hvac

company, and CEO of Formation Software services, a software contracting company supporting information systems for utilities, technology and financial companies including Pacific Gas & Electric, Hewlett Packard and Charles Schwab. He was also a research engineer in Apple's Advanced Technology Group, a research associate at Lawrence Berkeley National Laboratory, and he lectured in Advanced Topics in Integrated Demand Side Management at Stanford University's Department of Civil and Environmental Engineering.

Jamillah directs all Human Resources and Administrative functions at Energy Solutions overseeing and developing policies for recruiting, compensation, employee relations, organizational development, training, and team building. Her passion for inclusion and her experience working with diverse populations result in a vibrant work culture that supports people from all backgrounds and talents and allows people to flourish. Through her skilled diplomacy and expert coaching, she builds partnerships across the organization to support innovative policies that foster continual learning and growth and set high standards, which are essential to achieving the company's business objectives.
