

Europe renewable energy bangladesh

Ambassador of the European Union (EU) to Bangladesh Michael Miller has said there are many opportunities to work more on renewables in a country like Bangladesh which has a low amount of renewable capacity.

He said it does mean that the opportunity is there to expand renewable energy facilities quickly, and they have both experience in the European Union and financing available.

"We think there's a scope to work with Bangladesh on air quality and air pollution. But, the big investment that I would want to talk about is in renewable energy," Ambassador Miller told UNB in an interview at his Embassy office.

Between 2021 and 2027, Team Europe will mobilise up to EUR300 billion of investments for sustainable and high-quality projects, taking into account the needs of partner countries and ensuring lasting benefits for local communities.

Ambassador Miller said they had a Global Gateway Forum last year which mobilized 400 million euros as a facility from credit to help build essentially - it is building power plants, building stable grids infrastructure, and it is building interconnections.

"I think it's just such an obvious area (climate change) where our partnership can be imbued with substance. So we are doing lots of work in terms of financing the environmental upgrade of the textile sector," said the Head of Delegation of the EU in Dhaka.

For example, Ambassador Miller said they are working very specifically on decarbonizing the brick industry, which is a huge polluter.

Talking about Global Gateway, he said it is an approach to building secure and open and trusted networks.

When there would be a possibility to promote cooperation with neighbours, cooperation with Nepal, for example, then these are areas where they would want to explore, said the EU envoy.

"It's huge that we have the same agenda because of the climate vulnerability of this country, and because we are extremely committed to combating climate change," Miller said.

In Brussels, he said, there is a huge political transition and hopefully by the middle of November, they will have a new college (of the European Commission).

Ambassador Miller said that Chief Adviser Prof Muhammad Yunus is a political "rock star" with access to

Europe renewable energy bangladesh

everywhere.
