Use our filters to find the charging points that best match the characteristics of ...

The evway map is available online and through its official App, that allows you to access its extended and complete version of all information. It is not difficult to understand why the evway map is the most useful and complete in Europe.

The evway app allows you to accurately and easily identify locations where you can charge your electric car in the UK and throughout Europe and offers numerous services so you can travel in complete safety and relaxation.

It will be very easy to find where to charge your vehicle with over 200.000 charging stations across the continent, from large cities to more rural areas, also counting the electric vehicle charging stations on the motorway. The evway map shows all the interoperable charging stations or those of other operators and partners with which evway has agreements. The evway network has over 200 interoperable European suppliers, for a total of 180.000 charging stations outside of Italy. In Italy, it allows for interoperability with the Enel X circuit, for complete coverage in the country.

The evway map has been developed to be user friendly, accompanying the user in the various stages of choosing the spot, driving to, accessing and paying and is optimised for anyone who uses an electric car or is travelling on an e-bike or e-scooter. Once you open the app and locate your position, many blue pins of different shades will pop up, indicating the thousands of charging stations around you.

When you tap on a pin, a window will open with the address, telephone number, distance and all available information, such as the data on the type of socket available, station status (green dot if free, blue if occupied and red if it is under maintenance) and maximum power output.
