

Finland electricity safety

In Finland electrical works are for safety reasons regulated by law and law-related regulations. These regulations lay down binding requirements, which cover e.g.: what kind of qualifications are needed to do electrical works; what kind of inspections are required; what are the technical requirements for the installations; how safety is ...

Electricity makes many things possible, but if used incorrectly it can endanger lives and destroy property. In this section you can find information on competency, installation work and electrical installation requirements.

Adequate electrical safety requires safe procedures, a responsible approach and a due respect for the dangers of electricity. Workers must be shown safe procedures and provided with appropriate tools and personal protective equipment.

A valid electrical safety card is required for every person working on electrical work. The aim of the training is to identify the hazards of electricity and to go through accidents caused by electricity. Other topics include legislation and regulations related to electrical safety and the content of the SFS 6002 standard.

Electrical Safety Act We are in the process of renewing Finlex and have now released a test version of the new service. You can access the test version at [beta nlex](#) .

The aim of the training is to identify the hazards of electricity and to go through accidents caused by electricity. Other topics include legislation and regulations related to electrical safety and the content of the SFS 6002 standard.

Those who have successfully completed the training and exam will receive a card for the training, which is valid for five years. The training is provided by an electrical work safety trainer authorized by Seti Oy.

The price of contact training includes course material, an electrical work safety card and course services (morning and afternoon coffee and lunch).

In addition to open training, we also organize subscription courses throughout Finland. In addition to the Finnish language, it is also possible to keep the training in English or Swedish.

Web implementations are organized through Microsoft Teams. A link entitling to participation in the training

Finland electricity safety

will be provided separately in the e-mail provided by the participant before the start of the training. The participant must have access to a computer that can be used for video communication and discussion during the training.
