

Going solar without rooftops

Going solar without rooftops

Top alternatives to rooftop solar panels

As subject matter experts, we provide only objective information. We design every article to provide you with deeply-researched, factual, useful information so that you can make informed home electrification and financial decisions. We have:

Sourced the majority of our data from hundreds of thousands of quotes through our own marketplace.

Incorporated third-party data and information from primary sources, government agencies, educational institutions, peer-reviewed research, or well-researched nonprofit organizations.

Built our own database and rating system for solar equipment, including solar panels, inverters, and batteries.

We won't charge you anything to get quotes through our marketplace. Instead, installers and other service providers pay us a small fee to participate after we vet them for reliability and suitability. To learn more, read about how we make money, our Dispute Resolution Service, and our Editorial Guidelines.

What if there was a way to support local clean energy and save on your electric bill without installing a single solar panel? Community solar offers just that. Whether you're a renter, don't have a solar-compatible roof, or you prefer not to install equipment on your property, you can sign up for a community solar project.

When you subscribe to a local community solar farm, you reap the benefits of solar energy without purchasing any equipment. It encourages more clean energy in your community while reducing your yearly electric bill. We'll explain how to decide if community solar is right for you and why it's different from other alternatives to utility electricity, like green power plans and community choice aggregation.

Community solar projects are large solar panel farms that generate electricity for more than one property.

Community solar empowers more people to access the financial and environmental benefits of renewable energy.

Most community solar subscribers save between 5 and 20% annually on electricity costs.

Community solar isn't available in every state, but the number of states passing the necessary legislation is quickly growing.
