

Green energy savings

Green energy savings

Consumers can find financial incentives and assistance for energy efficient and ...

"Going green" generally means behaving in a way that protects the environment. That can include recycling, using your car less, and better insulating your home so that it consumes less energy.

Going green can be important for both your personal finances and the well-being of the planet. For example, some people are able to heat and power their homes with the sun or wind. This saves them a fortune on bills while reducing air pollution.

The U.S. government estimates that its Inflation Reduction Act can reduce carbon emissions by roughly 40% by 2030. That's quite an ambitious target that would drastically help, among other things, boost the quality of the air we breathe, the water we drink, and the food we eat.

Daniel Liberto is a journalist with over 10 years of experience working with publications such as the Financial Times, The Independent, and Investors Chronicle.

If you don't have a tax liability, then you may not be able to take advantage of--and get refunded for--the quoted tax-credit percentage of your purchase.

Going green can be important for both your personal finances and the well-being of the planet. For example, some people are able to heat and power their homes with the sun or wind. This saves them a fortune on bills while reducing air pollution.
