

Group 24 battery specifications

Group 24 battery specifications

Traditional group 24 lead-acid batteries have the following specifications:

Group 24 batteries are typically characterized by the following specifications:

Group 24 batteries are a type of lead-acid car battery commonly used in large trucks, RVs, farm equipment, and other heavy-duty vehicles. As their name implies, they fit a standard "group size" that has specific dimensions established by the Battery Council International. But what exactly are group 24 batteries, and why are they a popular choice for powering large vehicles? This guide will explore everything you need to know.

The group size on a battery refers to its standardized physical dimensions that are assigned by the Battery Council International (BCI). There are several common group size designations for lead-acid automotive starter batteries:

The group size allows for standardized trays, clamps, and other accessories to fit a range of batteries from different manufacturers as long as they share the same group size designation.

Knowing the right group size is important when replacing a battery to ensure proper fitment and electrical connections to the vehicle. The group size is usually imprinted on the top or side label of the battery along with other technical specs. Checking your vehicle owner's manual can also confirm the correct group size battery for your make and model.

The high CCA provides the power to start diesel engines. The size offers capacity to run accessories.

However, lithium batteries are gaining popularity due to their benefits, take LiTime 12V Group 24 LiFePO4 lithium battery for example:

While lead-acid group 24 batteries are a trusted solution, lithium is an increasingly attractive upgrade for maximum power-to-weight and reduced long term costs.

Group 24 batteries offer numerous advantages for automotive and marine use. They have a higher capacity, allowing for longer run times before needing recharge. They also provide sufficient power output for engine starting efficiency. These batteries are compact and easy to install in tight spaces. They are built to withstand tough environments and extreme temperatures.

Many Group 24 batteries are maintenance-free, eliminating the need for regular upkeep. Moreover, they are
