Like all parts, batteries run their course. Most will last up to five years, depending on conditions and how often you drive. Signs of an aging battery include an audible slow crank when you attempt to start your engine, a lit check engine/battery light or the strange odor of rotten eggs.

If you have any concerns, Havana Ford offers a complimentary computerized battery test. Plus, each Motorcraft® battery we install features the latest technologies in design and engineering. They provide dependable power to today's high-tech vehicles across a wide range of conditions.

With over 47 million Ford cars, trucks and SUVs on the road today, it has never been more important to ensure your technician is familiar with your specific vehicle's battery needs. And no one knows your Ford better than Ford and the technicians at Havana Ford.

Other benefits of Havana Ford battery installation include:

To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzed reviews to verify trustworthiness.

Havana battery performance

A bad car battery affects engine performance by not providing enough voltage to start the engine. Symptoms of a weak battery include slow cranking and dim lights. Without proper power supply, the engine might not start, resulting in lower performance and reliability.

Beyond starting issues, a bad battery can impact fuel efficiency. When the battery does not hold a charge well, the alternator must work harder to keep the electrical systems functional. This increased load can strain the engine, potentially leading to decreased fuel efficiency and higher fuel consumption.
