I've reviewed dozens of electric cars as Travel Editor at T3, everything from the affordable Renault Twizy to the sensible Volkswagen ID.3 and the luxurious Mercedes EQS to the neck-breakingly quick Audi e-Tron GT.

Up until recently, I've been relying on public charging points to charge the vehicles, which is inconvenient at best, and unreliable at worst. So when Hive approached me to review its new Hive EV Charging box, I jumped at the chance and got it installed at home.

Hive EV Charging is a smart home charger for your electric vehicle. It includes installation from a British Gas electrical engineer and adds smart charging features via the Hive app.

It's not an understatement to say that it's completely changed how I view electric vehicles, as it's now so easy to recharge them and even more convenient than going to get petrol in an ICE car.

Here's how I got on with the Hive EV Charger.

I've reviewed this entire Hive EV Charger process, from ordering it online to charging an Audi e-Tron GT on my driveway, so I feel like I've got a pretty good understanding of the entire process.

It starts with an online questionnaire that determines whether you're eligible for a Hive EV Charger. You'll be asked simple questions such as 'Do you own your home or have permission from the homeowner to have an EV charger installed?' and 'Do you have a driveway or off-street parking next to your property?'

During this process, you'll be asked to send Hive a few images of where you want the charging box installed and of your fuse box.

If you're eligible, then Hive will arrange a video call with you. Mine was around two weeks after completing the initial online purchase. During this call you'll walk someone from Hive around your house, they'll ask to see things like your oven, your boiler, and to check your water supply is earthed. Basically, they just want to check whether any extra work needs to be completed before the EV charging box is installed. The person I spoke to was very polite and patient, despite my phone constantly disconnecting during the call.

The wall box installation was then booked for around two weeks later.
