Wind energy is soaring in the U.S.; the nation's renewable energy capacity has more than tripled in the past nine years, and wind and solar power are largely responsible. Now businesses want to harness even more wind energy, at a cheaper price--and one of the best ways to lower cost is to build bigger turbines. That's why an alliance of six institutions led by researchers at the University of Virginia are designing the world's largest wind turbine at 500 meters tall--almost a third of a mile high, and about 57 meters taller than the Empire State Building.
