

How to buy green energy

How to buy green energy

3 ways for corporations to purchase renewable energy

Renewable energy is critical to combating climate change, and your support is crucial. CLP Renewable Energy Certificates (RECs) offer you a simple and flexible option to support clean energy generation. They also help you achieve your sustainability goals. Each unit of REC represents the environmental attributes of electricity produced by local renewable energy sources. These sources include solar power, wind power, and landfill gas projects, generated or purchased by CLP.

With one small step, you can play your part in making Hong Kong a greener, smarter city. Act now.

RECs are an easy, alternative way to support green energy apart from installing a renewable energy system on your premises. With RECs, you can declare you are using renewable energy of your business.

Qualify for the right to claim emission reduction benefits

You can claim the benefits of reducing your company's carbon footprint associated with electricity generated from renewable energy sources.

Our RECs meet the RE100, CDP (formerly Carbon Disclosure Project) and ESG reporting requirements*. Your company can fulfil the commitment on international business green energy initiatives and contribute to the corporate social responsibility.

Media Channel: South China Morning Post

Media Channel: Hong Kong Economic Times

The renewable energy represented by RECs comes from new projects connected to the CLP grid. This means they support continuing expansion of Hong Kong's renewable energy resources.

RECs represent energy from renewable energy systems within our grid. Most of the energy are generated within a 25km radius of the point of consumption.

We can provide a 24/7 clean energy mix for businesses seeking constant clean energy consumption. Our renewable energy portfolio consists of solar and wind power and energy from landfill gas.
