Inexpensive solar panels for home

Today's Homeowner exists to help you maintain or improve your home safely and effectively. We uphold strict editorial standards and carefully vet the advice and resources referenced in our articles. Click below to learn more about our review process and how we earn money.

Converting your home to renewable energy by installing a rooftop solar panel array is a major financial commitment for most homeowners. Anything you can do to lower the cost goes a long way to making it easier to take the leap and start paying your utility company less money each month. But how do you know which cheap solar panels are a good deal and which are too cheap to be worth it?

Just because a manufacturer makes affordable panels doesn't mean its products are low quality. Here are my picks for the top-rated cheap solar panel manufacturers:

Purchasing low-cost solar panels requires a bit more attention to detail than buying high-quality panels since there are more low-quality options you need to avoid if you want a good system. Here are the four main things to look for when shopping for cheap solar panels:

There are tons of manufacturers that make affordable solar panels, which makes it difficult to figure out which companies are worth your time and which make lower-quality panels. Overall, you can't go wrong with Qcells or LONGi. Both companies make high-quality, affordable panels for home solar use.

Before we dive in, I should mention that some brands -- notably Panasonic, LG, and Tesla -- no longer make their own panels. You might see these brands in other articles that have outdated information.

The table below provides a high-level look at my picks for the top seven cheap solar panel manufacturers.

QCells is known for being one of the more affordable residential solar panel brands, so it's a great choice for homeowners looking to switch to solar on a budget. The company is a tier 1 manufacturer that focuses on making high-quality, low-cost monocrystalline panels. Qcells is operated by the South Korean company Hanwha.

Qcells is the de facto standard for low-cost home solar panels. The company manages to produce high-performance photovoltaic (PV) panels at an incredible price point, taking advantage of its affordable manufacturing setup in South Korea.

Qcells's panels provide an excellent balance between cost and performance. The company produces solar PV panels that cover a range of efficiency ratings between 19.6% and 21.2%, giving you a variety of price points and performance levels to choose from.

Inexpensive solar panels for home

The company's panels are also known for being extremely durable and are capable of withstanding higher-than-average wind speeds, snow loads, and high temperatures. Qcells stands behind its products with a 25-year equipment and performance warranty, which guarantees that your panels' efficiency won't drop below 86% of their initial value.

Even though Qcells is my pick for the best overall cheap solar panel manufacturer, there are some things I don't love about it.
