The heavier the car, the more fuel it will consume. Since range is an issue for electrical vehicles, and the weight of batteries is considerable, there is also a big incentive to find ways to make these cars as light as possible.

It was politics as far as our eyes could see and our ears could hear last night: Most of the nation's talking heads had coverage of Foreign Minister Sameh Shoukry's joint presser with his Libyan counterpart Najla Mangoush, who was in town yesterday on the heels of intelligence chief Abbas Kamel's visit to Tripoli and Benghazi on Thursday. Among those who took note: Kelma Akhira (watch, runtime: 4:23 | 2:35) and Al Hayah Al Youm (watch, runtime: 3:51).

El Nasr Auto's plans to produce Chinese EVs was still on the agenda, with managing director Hany El Kholy confirming to Al Hayah Al Youm's Lobna Assal that the state-owned company is moving ahead with plans to roll out 3k electric vehicle charging stations over the next 16 months (watch, runtime: 28:23). A full charge at a station — sufficient for a driving range of 400 km — will cost EGP 160, making EVs more affordable to run than gas-powered cars, El Kholy said. Ala Mas'ouleety had yet more coverage of El Nasr's presser last week, when it announced it was importing EVs from China ahead to begin testing them on Egyptian roads next month (watch, runtime: 7:03).

Renewables leader Infinity is working with the company on the rollout of the charging stations, starting with some 2k charging points at 1k stations in Greater Cairo, Alexandria, and parts of Qalyubia.
