Solutions come in different configurations according to each client's requirements. Ranging from a basic stand alone UPS, to a fully integrated battery or Gen Set solution.

Each item in a factory, or home has a CONSUMPTION PROFILE measured in kWh

This being the measurement according to the specific maximum consumption at any one time.

The length of time the battery is required to output its power to the items. Measured in time.

The mains board that has separate circuits that we can attach the UPS or Inverter and identify emergency circuits.

This means wiring / distribution of electricity

A small standalone inverter combined in one box with basic lead acid battery for powering a TV/ PC and a few lights.

An electronic device used to convert (DC) Direct Current (from the solar panels) to (AC) Alternating Current to the distribution board.

A commercial application to convert the DC from the solar panels to the DB. DOES NOT allow for batteries.

An intelligent inverter that allows multiple inputs from Grid, Battery, Solar and Gen Sets Ideal home use and small factory.
