Follow Expert Advice and Step-by-Step Guides to Find the Best Generator

Select from Appliances or Devices to Automatically Calculate the Minimum Generator Size in Kilowatts Required

Solar Generators convert solar energy into electrical power and store it in a battery for later use. Any battery generator or portable power station becomes a solar generator by adding solar panels.

Energy from the Sun is free. Capturing it and storing it as electricity allows us to use it even when the sun isn't shining--or when the power goes out. A solar generator has four main parts:

As long as you have sunlight, the solar generator stores it as electricity to use when you need it.

Larger capacity models can handle multiple appliances or even your refrigerator.

Remember--higher loads drain the battery faster. A few LED lights could run for days, but the refrigerator might run out of power after a few hours.

Portability makes it possible to take your power anywhere. A portable solar generator can run a fan in the tent for sleeping, provide a few lights to light up the campfire circle, and possibly brew the morning coffee.

At a tailgate party, power up the television, turn on the music, and keep the crock-pot hot. The possibilities are endless.

Convert energy from the sun into electricity and store it in a battery for use when you need it. It's not a new concept. No need for gasoline or propane or diesel or refueling in the middle of the night in the pouring rain. Don't worry about someone stealing it while you sleep--it's perfectly safe to use it indoors.
