

Luxembourg city environmental sustainability

With the "SuperDrecksK?scht fir Betriber(R)" initiative, the City of Luxembourg has adopted a modern approach to waste management as part of its environmental action plan - and one that is a critical element of the larger country-wide waste management system. Aimed at ensuring the continuous improvement of its environmental management system, this initiative highlights the leading role that the City of Luxembourg has come to play in the eco-restructuring of our society. Through its own actions, the City of Luxembourg aims to encourage other national stakeholders to enhance their efforts to protect the environment and make reasonable use of natural resources.

The City of Luxembourg aims to prevent and reduce the use of hazardous products by its departments in their daily activities. Where their use cannot be avoided, however, employees are asked to recycle and dispose of these products following certain procedures:

The purpose of this label is to encourage municipalities to step up their environmental efforts and give greater visibility to the measures they have taken to protect the environment at municipal level. They are evaluated by a jury in the following categories:

On 23 January 2015, the City of Luxembourg was awarded the "Naturgemeng 2014 Label" in recognition of its environmental protection efforts. These included the realisation of a series of outstanding projects, which combined aspects of both municipal planning and environmental conservation in a truly exemplary fashion. Environmental protection and sustainability are key pillars of the City of Luxembourg's land use planning policy as part of its larger aim to achieve balanced development.

The City of Luxembourg was first certified as a "Fairtrade Gemeng" in September 2011, and this certification was later renewed in June 2017 - clear proof of its commitment to fair trade.

In its daily activities, the City of Luxembourg strives to adopt best practices for promoting sustainability. These enable it to contribute to sustainable economic development in Africa, Asia and Latin America in a way that respects both people and the environment.

The City of Luxembourg has been awarded the "Naturgemeng" label by Fondation Hellef fir d'Natur twice in six years. The City of Luxembourg stopped using pesticides in 2009. This policy was officially instituted by a resolution of the municipal council in May 2011. The City of Luxembourg has decided to:

This initiative aimed at protecting and promoting respect for the environment will have a significant impact on the preparation of the City of Luxembourg's new development plan, as well as on the air and water quality, and by extension the quality of life of its citizens.

By signing up to the GMO-Free Luxembourg initiative (Luxembourg sans OGM), which included 26 organisations in 2009, the City of Luxembourg has joined sides with the majority of Luxembourgish consumers, who refuse to put GMOs on their plates. The City of Luxembourg has thereby reinforced its commitment at international level to promote policies that protect the environment, agriculture and the health of consumers from GMO-related risks and dangers by:

As long-term sustainable development is only possible if individuals and societies change their way of thinking and behaviour, the City of Luxembourg is making a significant contribution to protecting both the environment and animal species with its declaration of commitment entitled "Selbstverpflichtung - Proppere Pab?ier" (Commitment - Clean Paper).

Since February 2008, the City of Luxembourg has worked toward:

As the application of these practices is not governed by a supervisory committee, it is the municipal staff themselves who have become informal ambassadors of this initiative thanks to transparent information and education efforts. Over time, this form of voluntary participation will help the City of Luxembourg achieve its sustainability objectives. In this way, this memorandum will serve to successfully mitigate climate change and preserve the environment.
