Madrid specific companies and products

Cabify goal is to provide an excellent service that replaces personal vehicles and company fleets.

Payflow is a B2B2C platform that enables employees to access their earned income on-demand. Employees can use the mobile app to instantly get paid a fraction of their earned salary, whenever they want, or wherever they may be. Payflow is fair, transparent and affordable, unlike other short-term financing solutions. Employees feel their future is more secure knowing they have a safety net for unexpected expenses, improving their wellbeing and thus productivity

IDOVEN busca detectar de forma temprana problemas card?acos para prevenir enfermedades como el infarto de miocardio y la muerte s?bita. Para ello estamos redefiniendo la manera en que se diagnostican las arritmias card?acas combinando algoritmos de Inteligencia Artificial en la nube con tecnolog?a wearable.

Spotahome is a direct booking platform offering personally-checked apartments for expats moving to a new city. Video tours, photos and floor plans make Spotahome"s property listings the most complete on the web, allowing expats to confidently choose a home from afar. Spotahome is a fast-growing company founded by a multi-cultural team with experience building international businesses.

Quasar is a new app-chain built in the Cosmos Ecosystem, optimizing inter-chain value capture with human-centric design. Its mission is to provide sustainable, sovereign, and ergonomic investment vehicles for digital assets.

Quasar"s flagship product will be yield-aggregating vaults that enable users to easily deposit Cosmos-based tokens, and passively earn yield generated from automated strategies. It will function like a decentralized, permissionless hedge fund. Its first strategies will be deployed on the Osmosis DEX, and the protocol will proactively expand to other DeFi applications ...

Meep is a digital mobility ecosystem that integrates all modes of transport providing operators, cities, and end users access to the latest tech for multimodal transport, data and complete mobility experience.

1. Mobility and Smart City Platform (MaaS platform): This is a back-end software where cities, transport operators and authorities with already existing apps can link their apps to all of our transport services without having to create a new MaaS app. We have integrated mobility services providers, city service providers and many payment gatewa...
