The SCE scheme is meant for energy cooperatives and homeowners" ...

Do you want to make your business premises more sustainable, for instance ...

Approximately 1.5 million Dutch homes (in Dutch) are equipped with solar panels, while a growing number of business owners are also installing rooftop solar panels. Statistics Netherlands (in Dutch) reports that for the first time in 2020, more solar panels in the Netherlands were found at businesses than at private homes. This is not surprising, as after purchasing solar panels, you benefit from solar energy for an average of 25 years.

With energy prices soaring, investing in renewable energy pays off: a set of 10 rooftop solar panels will save you an average of approximately EUR1.000 euro per year (in Dutch) on your energy bills. The exact payback period depends, of course, on your personal situation. But it is a fact that solar panels are an investment that will save you money and energy over the long term. The Dutch Consumers' Association (Consumentenbond) applies the following rule of thumb (in Dutch): you will recoup your investment in around 6 years, after which you will be able to consume free energy for another approximately 19 years.

Solar panels are not only good for reducing your energy bills, but also for the climate. They run on sunlight, which is a renewable source. Even though the panels are manufactured in production facilities, they are still less harmful to the environment (in Dutch) than fossil sources.

By 2050, all forms of non-renewable energy will be banned in the Netherlands, and this is where solar panels, among other renewable sources, come in. A survey conducted by the Dutch Consumers' Association (Consumentenbond) (in Dutch) reveals that a growing number of consumers believe in the importance of corporate social responsibility (CSR) (in Dutch). A green image will also help you to set yourself apart from your competitors.

Are you considering investing in solar panels? There are a number of issues you need to take into account.

Netherlands solar energy for businesses

Since not all roof structures are strong enough to support solar panels, you should first check where you would like to install them. There are tools (in Dutch) to help you check whether your roof is suitable for this purpose. A consultant might be able to help you establish this. If you are unable to install solar panels on your own roof, you could explore the idea of purchasing solar panels with several other local businesses or local residents and installing them in a local field or on a local rooftop. You can apply for a grant under the Cooperative Energy Generation Grant Scheme (Subsidieregeling Coöperatieve Energieopwekking) (SCE).
