

Off grid power scam

Off grid power scam

: An online article or product listing says that the StopWatt "electricity-saving box" was created by Elon Musk and Tesla.

Nikola Tesla was a famous engineer and inventor best known for his contributions to electricity supply systems. Many have tried to imitate his greatness but few have succeeded. How can you tell if machines currently on the market that bear Tesla's name, such as the Tesla "Off Grid Generator", are fact or fiction?

If you've looked into or heard about the "amazing Tesla off grid generator", you've probably seen that a Dr. David Ranko claims the generator (a Tesla coil) costs less than \$100 to build, could power your entire home and save you hundreds of dollars in utility bills each month. This energy-saving device is purported to be so basic and easy to use that a teenager could build it just an hour or so. Sounds great, right? Sadly, Dr. Ranko is selling lies.

Now to be clear, Tesla did invent something now known as the Tesla coil in 1891. The Tesla coil is built using 2 simple metal coils to generate high voltage electrical fields. Its long electrical arcs can power things a few feet away. Tesla used various forms of his coil to study x-rays, radio, wireless power, and even the earth's electromagnetism. Here's a quick video of a Tesla coil in action from the fantastic Channel Smarter Every Day:

If the Tesla coil was designed absolutely perfectly, it would actually be self-sufficient meaning free electricity for all. Unfortunately though, we live in the real world and Tesla coils must be connected to an outside power source to continue functioning. Simply put, the Tesla coil is just not a way to produce electricity.

The "Tesla Off Grid Generator" is being touted as a device that collects radio frequency radiation and turns it into electrical energy. Although such a device can generate a small amount of energy, the power generated is far less than that of even a small solar panel and much more expensive.

Anyone claiming to sell "free, unlimited" energy is a scam artist, including Dr. Ranko. All forms of energy follow the laws of thermodynamics, are limited and require effort to harness. The first law of thermodynamics states that energy can neither be created nor destroyed; it can only change forms. You've probably seen the first law of thermodynamics in action. If you've ever played with a perpetual motion machine, you know that eventually it does stop moving.

The same goes for the Tesla Coil. Each time energy passes back and forth between the two coils, some of it is converted to heat. Eventually it would need to pull more energy from an external source.

Off grid power scam

There's simply no way Dr. Ranko's device lives up to his claims. Without an external energy source, the Tesla Off Grid Generator would stop moving, too. Most forms of energy must be collected and converted to power suitable for home use, a task which itself requires energy to do.

And as an aside, while Tesla coils are super-cool and can generate beautiful electrical arcs, it should be used only by professionals, and with an extreme amount of caution.

The electrical arcs are a fire hazard and can interfere with the functioning of electronic devices a few feet away, making a Tesla coil very dangerous for home use. If you're standing too close when it arcs, you could be seriously shocked or burned. Some powerful Tesla coils have enough electricity to kill someone.

Generators are used in modern power plants and supply the energy we use to power our homes. To understand how a generator works, consider this example: a water pump works by adding pressure to water molecules to facilitate water flow. An electricity generator works in the same way; a magnet applies "pressure" on the electrons to create electron flow.
