Like full battery electrics, PHEVs are judged by their electric-only range, but, because they are partially motivated by an ICE, also their fuel once their batteries run out of free electrons. Oh, and like all cars, they must prove their performance compared with their peers, not to mention exhibit traditional attributes like comfort, ride and pricing. Using those parameters as the prime criteria -- plus a few more pertaining to specific segments -- here is our list of best PHEVs on the market today.

It'll cruise up to 135 kilometres an hour on battery power alone and, when said lithium-ions are depleted, still ekes out about six-and-a-half litres per 100 kilometres. It handles decently too. Indeed, other than an engine that sounds like the proverbial can of marbles -- shaken by a very angry chimp -- and the fact that it is perennially short supply, the RAV4 Prime is an absolute standout in the PHEV segment.

The first thing you should know is that the Ramcharger, despite being a plug-in and having a gas-fed internal combustion engine onboard, is not a plug-in hybrid; it's a range-extended EV. The difference is that while a PHEV -- all the other vehicles on this list -- can drive the wheels with either the electric or gas motors (or, most often, both simultaneously), the Ramcharger's wheels are always powered by electricity. When its 92-kilowatt-hour battery runs dry and the 3.6-litre V6 kicks in, it simply acts as a generator to recharge the battery which, in turns, drives the wheels.

On battery power alone, Stellantis says the Ramcharger is good for 230 kilometres, but when the gas engine kicks in, it can extend that range another 890 clicks for more than 1,100 kilometres of combined road-tripping goodness. No one knows how much of that range will be available when towing the 14,000 pounds the Ramcharger is rated for, but, even if it's half of its rated range, that's literally miles ahead of the 150 or so kilometres Ford's F-150 manages when it's towing a heavy load. If the Ramcharger does prove be that robust, look for it to be a game changer.

What's even more thrilling is the 17 kWh lithium-ion battery, which is good for 35 kilometres of electric motoring. It also runs silently and stealthily with the 4xe, which delivers a Tread Lightly off-roading feature. This creates much less disturbance than most off-roading vehicles. The regenerative braking is great for all the stop-and-go that is common with off-roading, making it a great choice for fun and adventure.

Deciding what electric vehicle is the most budget conscious was a difficult choice. The Hyundai Kona and Chevy Bolt both have plenty of perks and benefits. The Kona has a nicer d?cor and is more luxurious, but the Chevy is definitely not your average ride either. The Bolt provides more legroom and headroom inside, which may appeal to some people over the luxury of the Kona. However, when it comes to cargo space, the Kona has a little bit more space.

As far as the engine performance goes, the Hyundai delivers 201 hp, while the Bolt brings 200 hp. So, they're basically the same. Both are great choices, so it depends on what you're looking for.

The upcoming 2022 Hyundai Santa Fe is sure to be a head turner and an efficient ride. It's powered by a 1.6L 4-cylinder engine, which will put out 226 hp. This Luxury ride also features AWD, a benefit for many drivers. Plus, you'll have all the needed driver assistance and safety features to put your mind at ease while on the road. Whether you're looking to take the Hyundai Santa Fe for a long cruise or driving around town, you'll have a safe and reliable vehicle.
