

# Portable solar panels for backpacking

## Portable solar panels for backpacking

In recent years, technology has brought real changes to backpacking. Cell phones, personal locator beacons and other devices have made backpacking a safer way to enjoy the outdoors. And powering those devices has been made easy by the development of the backpacking solar panel.

Whether strapped to your backpack, or unfolded at your campsite, a backpacking solar panel can now be part of your adventuring gear. But choosing the best backpacking solar panel for your needs might just be a little tricky.

Read on for our recommendations on the best backpacking solar panel options. You'll also find a buyer's guide, along with answers to some frequently asked questions. Hopefully, this post will allow you to keep a sunny disposition while making your panel choice.

**Best Overall** Nekteck 28W Portable Solar Panel Charger

**Best Budget Option** FlexSolar 15W Small Solar Panel Charger

**Best Premium Option** ALLPOWERS 100W Portable Solar Panel

Weight is everything in backpacking, with lighter hiking being better hiking. The Nekteck 28W Portable Solar Panel Charger takes that into account, and packs considerable power into a package weighing less than 1.5 pounds.

But that's just one reason this Nekteck solar panel is our recommendation as the best overall choice for a backpacking solar panel. With two USB ports, the Nekteck 28W panel can charge a cell phone and a tablet or camera or other device at the same time.

Another great feature of the Nekteck solar panel is that you need not wait until you're setting up camp each day to use it.

Instead, you can simply use its hooks and eyelets to attach it to your backpack. As it gathers sunlight, the Nekteck panel can be connected to your two devices while they're secured in your backpack. That way, your devices are ready to use when you stop for the day.

So let's say you're a little skeptical about investing in a backpacking solar panel, and don't want to spend a lot of money. The FlexSolar 15-watt solar panel, weighing just 1 pound, is an excellent choice. In fact, it has earned our recommendation as the best budget-conscious backpacking solar panel.

## Portable solar panels for backpacking

But don't think the FlexSolar's \$40 price signals a lack of quality or performance. On the contrary, the FlexSolar charger includes special features that both protect its three solar panels while ensuring maximum capturing of sunlight.
