

## Praia energy management

While most of the content on this website is professionally translated some items may be automatically translated by translation software.

Through the European programme of the Covenant of Mayors in Sub-Saharan Africa (CoM SSA), the Praia City Council has started the formulation of a group of projects focused on mitigation, climate adaptation and access to sustainable energy. These projects should be the starting point to discuss the reality and specificities of each community and neighbourhood of the city, as well as their priorities for action in the areas of climate and energy, according to the principles and guidelines of the SEACAP elaboration process, and their strategic objectives.

In this spirit, 13 locations in the city of Praia have already been selected, to carry out an inventory of priorities and the formulation of projects, including the preparation of technical, economic, social and environmental feasibility studies.

In addition, a Technical Support Group (TSG), led by the two city councils and AECID partners that are based in Cabo Verde, has been created. This TSG involves different organisations, national and international partners of CoM SSA in Cabo Verde such as the University of Cabo Verde, the National Directorate of Industry, Commerce and Energy, the National Directorate of Environment, the Centre for Renewable Energy and the Industrial Maintenance or the ECOWAS Centre for Renewable Energy and Energy Efficiency.

The TSG was created with the objective of providing the City Councils of Praia and Ribeira Grande de Santiago with support services to advise them and maintain the quality of the activities implemented in the project. The TSG is further tasked with facilitating the necessary monitoring in the elaboration and delivery of quality products in accordance with the technical and financial requirements, established in the ToRs and in the planned contracting of the entities and services subject to the contract. In addition, the TSG will assist with the planning, identifying, supporting and will provide technical support to help the municipalities properly assess the mitigation of risks identified in the implementation of the CoM SSA activities in Cabo Verde.

In the implementation phase of the pilot projects in the city of Praia, it is expected that integrating target communities from the population in the TSG, will allow for open and voluntary participation to solve problems, debate and respond to the identified needs. In addition, this will add to a value chain, which would assist in identifying an important space for the development and access to sustainable energy, in the adaptation against climate change.

CoM SSA is co-funded by the European Union (EU), the German Federal Ministry for Economic Cooperation and Development (BMZ) and, the Spanish Agency for International Development Cooperation (AECID).

Participants in ISO 50001 Lead Implementer Training in Praia will become proficient in implementing Energy Management Systems based on the ISO 50001 standard. The ideal candidates for this course are environmental managers, sustainability managers, energy consultants, quality managers, renewable energy experts, process improvement specialists, manufacturing and production directors, and renewable energy project managers. After finishing this course, candidates are required to take ISO 50001 Lead Implementer Exam in Praia. This exam evaluates their understanding of developing, implementing, monitoring, and maintaining an EnMS based on ISO 50001. The format of the exam is 20 multiple-choice, subjective questions which have to be completed within 2 hours.

ISO 50001 Lead Implementer Training in Praia offers all the necessary expertise in establishing, implementing, managing, and maintaining an Energy Management System (EnMS) based on ISO 50001. It also discusses the fundamental ideas and requirements of the standard. Additionally, it covers the concepts, strategies, techniques, and procedures needed for an EnMS's deployment and efficient management. This understanding allows candidates to plan, organize, and implement an EnMS. Energy Management System Course clarifies how ISO 50001 relates to other standards and regulatory frameworks. Furthermore, it provides information on ways to identify opportunities for improvement of an EnMS.

With this renowned credential, aspirants earn higher salary packages when compared to non-certified professionals in the field
