

## Redox flow battery companies

Also known as redox (reduction-oxidation) batteries, flow batteries are increasingly being used in LDES deployments due to their relatively lower levelized cost of storage (LCOS), safety and reliability, among other benefits.

Sumitomo Electric began developing redox flow batteries in 1985, and commercialized them in 2001. We deliver our products to electric power companies and consumers worldwide, and have built a track record through economic evaluations, microgrid demonstrations, and smart factory applications in distribution networks.

The Vanadium Redox Flow Battery (VRFB) stands for a progressive and innovative flow battery technology. Different oxidation states of dissolved vanadium ions in the electrolyte store or deliver electric energy. The electrolyte is continuously fed from a tank system into the reaction cell (also called Stack).

Stryten Energy's Vanadium Redox Flow Battery (VRFB) is uniquely suited for applications that require medium - to long duration energy storage from 4 to 12 hours. Examples include microgrids, utility-scale storage, data centers and military bases.

Redox One pioneers a sustainable energy future with safe, reliable, and cost-effective large-scale energy storage solutions. Through our proprietary Iron-Chromium Redox Flow Battery technology, we accelerate the clean energy transition, providing sustainable energy storage worldwide.

Innovation, volume as well as a high value creation: the long-standing industrial experience of the SCHMID Group is the basis for leadership in costs and technology of stationary energy storage.

EverFlow flow batteries offer maximum performance and scalability together with safety and recyclability. The EverFlow portfolio with storage solutions for small and mid-sized up to multi MWh size offers solutions for commercial and industrial customers as well as the utilities.

A decade long history in product development and constant improvements in the German R&D center are the basis for EverFlow high product quality and value.

EverFlow is committed to contribute to energy transition, reduce global fossil fuel consumption and help to preserve the planet for future generations.

The SCHMID Group is a technology group based in Freudenstadt, Germany. Founded in 1864, the group of companies employs more than 800 staff members worldwide and has technology centers and manufacturing sites in Germany, China, Turkey and the USA in addition to several sales and service locations worldwide.

## Redox flow battery companies

The group focuses on developing customized equipment and process solutions for multiple industries including Electronics, Renewables and Energy Storage.<https://schmid-group>

Specially designed for Base Transceiver Stations.

It is the perfect energy backup for On- and Off-grid telecommunication towers. Due to the unlimited cycling capabilities, the EverFlow Telecom Storage will reduce the site operational cost, in addition battery theft is no longer an issue.
