You candownloadour complete Our World in Data CO2 and Greenhouse Gas Emissions database.

In the selection box above you can also add or remove additional countries and they will appear on all of the charts on this page. This allows you to compare specific countries you might be interested in, and measure progress against others.

The data will continue to update - often on an annual basis - with the latest global and country emissions estimates.

Annual emissions figures are often used to compare countries" contribution to climate change. But this metric often reflects differences in population size across the world.

To understand the "footprint" of the average person in a given country, this chart shows per capita emissions.

These figures reflect "production-based" emissions, so do not correct for traded goods.

This interactive chart shows how much carbon dioxide (CO2) is produced in a given year.

This interactive chart shows the year-on-year growth in annual CO2 emissions.
