

# Rome clean electricity

## Rome clean electricity

The Italy-UNDP Energy Partnership was launched in 2022 jointly by UNDP and the Italian Ministry of Environment and Energy Security (IMEES) with the aim of to reducing the current energy access gap in developing countries by identifying clean energy initiatives and matching them with the required sources of finance.

Through its extensive country-level presence and convening power among local actors and institutions UNDP is the ideal implementing partner for such a programme, which requires coordination across key stakeholders of the respective national energy landscapes. Furthermore, as an international development institution, UNDP is well-positioned to build new partnerships among the innovative leaders in each of the national markets and the international sources of finance that will support the growing energy needs of developing economies.

In the initial phase, the partnership will focus on a set of 8 countries: Algeria, Nigeria, Zambia, Kenya, Rwanda, Comoros, Mozambique, and Eswatini.

The partnership initially targets eight African countries: Nigeria, Algeria, Kenya, Rwanda, Mozambique, Zambia, Eswatini, and Comoros, aiming to evolve an approach that can be replicated and scaled across the continent.

Theme : Role of Renewable Resources and Technological Advancements for Sustainable Future

Mark the Dates to Attend the Remarkable Conference
