

# San Jose clean energy electric generation charges

## San Jose clean energy electric generation charges

San Jose's Clean Energy is the new not-for-profit, locally controlled electricity generation service provider for San Jose's residents and businesses. Operated by the City and governed by the City Council, we provide customers with clean energy from sources like solar, wind and hydropower at competitive rates. We source electricity for customers, and PG&E delivers it over existing utility lines, and continues to do maintenance, billing and customer service.

As a government agency, operational surpluses will be reinvested into the community through programs and lower rates. SJCE is also committed to ensuring transparency and accountability for our service; customers are invited to participate in public meetings (City Council and Clean Energy Community Advisory Commission) and make their voices heard.

SJCE was created to reduce greenhouse gas emissions and help fight climate change. We are committed to achieving our goal of accelerating California's transition to 100% renewable energy by 2050 while providing cost-competitive power options. We're also playing a crucial role in San Jose's ambitious goal to be carbon neutral by 2030.

SJCE was created in 2017 to quickly reduce greenhouse gas emissions, improve air quality, and fight climate change. Since launching service in February 2019, we've been committed to providing clean energy at competitive prices. We're helping accelerate the state's transition to 100% clean energy by 2045 and San Jose's ambitious goal to be carbon neutral by 2030.

Transitioning to clean sources of energy will lead to better air quality and a healthier environment for you and future generations.

Additional benefits for our customers include:

Until February 2019, PG&E was the only electricity provider in San Jose.

In 2002, California Assembly Bill 117 established Community Choice Aggregation (CCA), a new way for California communities to provide local residents and businesses with a choice of electricity providers. A city or a group of cities pool (aggregate) the electricity demand from residents and businesses in their area and buy electricity for them. CCAs offer cleaner power mix options. SJCE is the new CCA for the City of San Jose, and we're the largest city in the country to operate a single-jurisdiction CCA.

While SJCE provides electric generation service, PG&E continues to deliver this electricity to your home and bill you.

## San jose clean energy electric generation charges

No, we are partners in providing your electricity service. SJCE replaces PG&#038;E's electric generation services with a local, publicly controlled electric generation service. We buy clean electricity for you, which PG&#038;E then distributes to San Jos? homes and businesses. PG&#038;E continues to provide customer and billing services, maintains power lines, and fixes outages. It also provides natural gas service.

Yes, reliability will absolutely stay the same. SJCE provides electric generation services, but PG&#038;E still has responsibility for power transmission, distribution, billing and service, and it continues to maintain the power distribution network as it always has.

As a City department, SJCE is governed by San Jos? City Council, which ensures public transparency. There is also a Community Advisory Commission. The City Council meets weekly, and the Community Advisory Commission meets monthly. All meetings are open to the public and your comments are encouraged.
