San Diego Gas & Electric (SDG& E), one of California's main investor-owned utilities (IOUs), has brought online a portfolio of four "advanced" microgrids equipped with 180MWh of battery storage.

The self-contained energy systems are aimed at giving greater resilience to disruptions in electricity supply for four communities in the San Diego area of the US West Coast state, as well as enabling them to make greater use of local solar PV generation.

At 39MW output to their combined 180MWh energy capacity, the batteries' average duration at the sites is around 4.6-hour, with each deployed at a different utility substation serving communities in Clairemont, Tierra Santa, Paradise, and Boulevard.

They are among dozens of microgrid projects aimed at enhancing energy security and reliability planned in construction or operation in California, which has a grid that suffers from many challenges, including wildfires and increasing peak loads during summer heatwaves.

While California's fleet of around 7GW of deployed large-scale storage is helping to combat the latter issue at a system-wide level, distributed microgrids are being seen as the answer to help individual communities, often on the end of distribution feeder lines, to stay resilient.

The new SDG& E portfolio's development directly sprang from an August 2021 Emergency Proclamation issued by California governor Gavin Newsom as the state faced imminent heatwaves that summer.

In declaring that State of Emergency, Newsom said it was "necessary to take immediate action to reduce the strain on the energy infrastructure, increase energy capacity, and make energy supply more resilient," to protect Californians' health and safety.

In addition to more immediate actions to be taken then such as expediting large-scale battery energy storage system (BESS) projects and implementing demand response programmes, SDG& E and the other IOUs, Pacific Gas & Electric (PG& E), and Southern California Edison (SCE) received approvals for microgrids to be constructed over a longer timeframe.

"For communities like mine that often experience outages during power emergencies, we welcome infrastructure that will help keep our lights on and our refrigerators running during difficult times," Nora Vargas, chairwoman of the San Diego County Board of Supervisors said of the new projects.
