"Energy Independence for a Sustainable Future"

Nautilus combines proven turbine designs with modern engineering precision and American manufacturing to generate clean, sustainable energy from water power resources around the world. Our team has over 30 years of experience in small scale, utility grade hydro operations and the ability to build site specific low and high head turbine systems. Based in the Pioneer Valley of Massachusetts, we're surrounded by the history of early hydropower development and continue the tradition of building technology that enables energy independence for a sustainable future.

Francis turbine is one of the most widely used turbines, HS Dynamic Energy's Francis turbines are commonly used at hydraulic head range of 6-500 meters, all our Francis turbine generator offer vertical type and horizontal type options.

Francis turbine Features:

Because different hydro power project head and flow should choose different turbine and different size turbine runner to meet, Turbine specification table can not show all the detail to meet all kind of condition of customer's project situation, here table only for reference, so please give me your Head and Flow, together with your requirement, we will make the suitable design to meet your need, thanks.

Check left side table, you will know how much power you can get based on different Head and Flow data, if you can not find it in the table, just tell me your project Head and Flow directly.
