

Smart energy solutions scotland

Find all the information you need on getting a smart meter for your home.

With our expert utility design, engineering capability, and project management, we deliver critical electrical, gas and water infrastructure for cross-sector customers. From industrial and commercial businesses to utility and telecoms providers, as well as civil works and residential construction, we've got the utility solution for your organisation.

We're a trusted metering partner of both energy suppliers and businesses across the UK domestic and commercial markets. With our nationwide coverage, we provide accredited gas and electric meter installation and management services that form the fundamentals of a smarter, greener grid.

Our industry-leading data collection, settlement and software solutions for gas and electricity supplies help our customers improve insight and efficiencies, enable energy and carbon reduction, and create enduring organisational value.

A strategic partner for carbon reduction, we take energy projects from concept to completion. Our data-driven consultancy alongside our asset funding, delivery and optimisation solutions help organisations deliver the smart systems and green technologies required to realise their sustainability goals.

By intelligently operating distributed energy resources as a Virtual Power Plant (VPP), our FlexiGrid platform delivers the real-time flexibility essential for delivering a decarbonised and decentralised energy system.

REMeDY (Revolution in Energy Market Design) is a net zero innovation project funded by UK Research and Innovation (UKRI) and led by Southend-on-Sea City Council which aims to bring affordable, low-carbon energy to residents and businesses using a Smart Local Energy System (SLES).

With the rollout of 654 on-street electrical vehicle (EV) chargepoints across 170 sites in six local council areas, the Virgin Media Park & Charge (VPACH) demonstrated a successful model that will shape the national rollout of public EV charging infrastructure in Britain for years to come.

Nominated for Energy Efficiency Project of the Year at the Business Green Awards, our Energy Services team helped Travelodge deliver an LED and BEMS retrofit for the hotel chain's UK estate, saving up to 4,000t of CO2 emissions and up to ?3 million per year.

Discover how we helped develop and install the first ever 3-phase SMETS2 smart meter for the UK market, marking a significant milestone for the country's transition to a smarter, greener energy system.

Smart energy solutions scotland

Our pioneering FlexiGrid(TM) platform is being used to provide the control and aggregation service required to effectively integrate zero-carbon electricity, transport and heat networks on the Orkney islands.

Our partnership with Alt HAN Co - the collective of UK energy suppliers - is testing the use of hybrid wired and wireless radio technologies to provide connectivity for premises currently located in smart meter 'blackspots', potentially unlocking benefits to one million British homes.
