We are trying to help customers get prepared for what is shortly to come, if you don't know what I mean, then this isn't for you. (One day everything will STOP, yes the signs all all over, and its happening faster than anyone can imagine)

The SK48v100 has been tested by Intertek Laboratories and has been tested to conform to UL 1973 standards. The draft testing report is available here and a final version of this report will be posted soon (Approx. Mid October).

Local AHJ's (authority having jurisdiction) have began adopting 2017 NEC that requires batteries and energy storage system to be listed. This excludes non-listed packs from being used in a system that is code-compliant (permitted). Now that the SK48v100 is listed to UL standards, it can be used in a system that is permitted, inspected and insured.

Often times insurance providers will deny a claim for damage if an unlisted system is involved in a claim, even if the unlisted system is not the cause of such claims.

The certification to UL1973 standards utilizes the same hardware that the SK48v100 has used since its initial conception, therefore, existing equipment conforms to the requirements for UL1973. If you have these initial packs that do not bear the "Conforms to UL1973 standards" label, then you may contact us for these labels.
